

Project WET

Water Education for Teachers

Project WET is an interdisciplinary water science and education program for formal and informal educators of K-12 students.

Project WET helps you inspire students to respect our precious water resources and to understand the importance of both sound water management and their personal commitment to environmental protection.

Founded in 1984, Project WET is active in all 50 states, the U.S. Islands, and provinces of Canada. International interest reflects the growing need for water education worldwide. In the United States, agencies like ADEQ, universities, museums and other organizations sponsor Project WET programs.
